Nameservers

Name Servers are used to point your Domain Name to your website or email service. We require that you maintain at least two Name Servers for your Domain Name.

Nameserver

+ Añadir más

DNS hosting

Configure records DNS, redirección de dominio, estadísticas y más. Asigne a su dominio los siguientes nameservers para utilizar este servicio.

- ns1.hosting.tu.pr
- ns2.hosting.tu.pr

Administrar

Child Nameservers

Child Name Servers are Name Servers which are registered as subdomains under your Domain Name. Once registered, you can use these Child Name Servers in turn as Name Servers for registering other Domain Names.

Hosting Features Included

The screenshot displays the cPanel interface with a dark blue sidebar on the left containing the cPanel logo and navigation links for 'Tools' and 'Solutions'. The main content area is titled 'Tools' and features several expandable sections:

- Email:** Includes Email Accounts, Forwarders, Email Routing, and Email Disk Usage.
- Files:** Includes File Manager.
- Domains:** Includes Site Publisher, Redirects, and Zone Editor.
- Metrics:** Includes Bandwidth and Analog Stats.
- Preferences:** Includes User Manager.

On the right side, there are two summary panels:

- General Information:** Shows Current User (blurred), Primary Domain (registrodeprueba4.com.pr), Shared IP Address (blurred), Home Directory (blurred), Last Login IP Address (blurred), Theme (Jupiter), and a link to Server Information.
- Statistics:** Shows MySQL® Disk Usage (0 bytes / 98.12 MB (0%)), Bandwidth (0 bytes / ∞), and Email Accounts (0 / ∞).

At the bottom, the footer includes the cPanel 100.0.10 logo on the left and navigation links for Home, Trademarks, Privacy Policy, and Documentation on the right.

Domains / DNSSEC

DNS converts domain names into computer-readable IP addresses. Use this feature to manage DNS zones. For more information, read the [documentation](#).

DNSSEC Keys for "registrodeprueba4.com.pr"

DNSSEC can protect clients from various forms of attack, such as Spoofing or a Man-in-the-Middle attack. Visitors' browsers will compare the DNS server's DS record to the DS record at the registrar. If they match, then the visitor knows that the record is valid. DNSSEC uses digital signatures to strengthen DNS authentication. These digital signatures use public key cryptography to sign the DNS data.

Domain Redirection

cPanel

Tools

Solutions

Search

Redirects

A redirect allows you to make one domain redirect to another domain, either for a website or a specific web page. For example, create a redirect so that **www.example.com** automatically redirects users to **www.example.net**. For more information, read the [documentation](#).

Add Redirect

A permanent redirect will notify the visitor's browser to update any bookmarks that are linked to the page that is being redirected. Temporary redirects will not update the visitor's bookmarks.

Type

Permanent (301)

https?://(www.)?

** All Public Domains **

/

Redirects to

www. redirection:

- Only redirect with www.
- Redirect with or without www.
- Do Not Redirect www.

Wild Card Redirect

Add

Note:

- Checking the **Wild Card Redirect** Box will redirect all files within a directory to the same filename in the redirected directory.
- You cannot use a Wild Card Redirect to redirect your main domain to a different directory on your site.

Current Redirects
